SKILLS

- **Languages:** JavaScript (es6-es15), TypeScript, sass
- **Frontend Frameworks:** React
- **Backend Technologies:** Node.js, Express.js, Next.js
- **Databases:** SQL, MongoDB
- **Other Technologies:** JWT, fs library, socket.io, RESTful API
- **Version Control:** Git, GitHub, Jira

EDUCATION

Begginer FullStack Development Course

Beta 2023 - 2024

A comprehensive beginner full-stack development course, covering all aspects of front-end and back-end technologies

Advanced FullStack Development Course

Beta 2024

An advanced full-stack development course with a focus on hands-on projects, providing practical experience in building complex web applications

LANGUAGES

English
Hebrew

ABOUT ME

As a Junior Full Stack Developer with hands-on experience in building various web applications end-to-end, I've worked with different tech stacks. I have a strong attention to detail and am a quick learner, eager to continue growing my skills in a team environment while contributing to creating efficient and user-friendly applications

EXPERIENCE

FullStack Development Course at Beta 2023-2024

- Developed web applications using JavaScript (ES6-ES15) and TypeScript, ensuring modern and efficient code practices.
- Built responsive and dynamic front-end interfaces with React and styled them using SASS for a polished user experience.
- Implemented server-side functionality with Node.js, Express.js, and Next.js, handling everything from routing to server-side rendering.
- Managed data storage and retrieval using SQL and MongoDB, ensuring reliable and scalable database solutions.
- Integrated authentication and authorization using JWT, enhancing security across applications.
- Utilized the fs library and socket.io to handle file operations and real-time communication within applications.
- Designed and consumed RESTful APIs for seamless interaction between front-end and back-end components.
- Used Git and GitHub for version control and collaboration, with experience in managing tasks and workflows using Jira.

Main Projects

- **Smart Mailing System (Engager):** Contributed to a team project developing a smart mailing system for sending WhatsApp messages to leads. The application was built using React, with API integration, Context, React Router, and custom hooks. I was responsible for implementing Google login and registration and creating reusable components. The design was crafted in Figma and implemented using pure CSS without design libraries.
- **Online Challenge Application (AmpUp):** Collaborated on a team project to create an application for online challenges with daily tasks for participants. The backend was built using Node.js, TypeScript, and Express.js, with the UI designed in Figma and styled with SASS. My contributions included developing the archive feature, which involved both front-end and back-end work—retrieving data from MongoDB, building the UI according to Figma designs, and ensuring smooth integration across the application.
